

Flowcytometry training by Flowise Scientific.

The Infant Immunology group at MRC Gambia was first trained in Flow cytometry in 2011. It was so brilliant that they got asked to come and do a repeat training for the whole unit in February 2013. The training completely improved our methods of doing flow work and the most junior staff now understands the essentials of proper staining, good compensation, gating strategies and requirements for publishing. We have all benefitted immensely and plans are being made for 2014..
